The Engineering and Technology Management Program (ETM) proposes six new undergraduate courses to be offered conjointly with the corresponding established online graduate-level courses.

Primary audience: individuals with Associate Degrees presently employed in technical firms to provide undergraduate certificates awarded by the College of Engineering and Architecture (CEA), funded by a federal grant program called “Make it in America”. ETM anticipate only a few incremental enrollments in the undergraduate counterparts and will limit the enrollments to 10% or less, or open a new section for undergraduates only, using adjunct faculty.

ETM is making no changes to the approved graduate-level courses, but will reduce course requirements for the undergraduates.

Please see attached materials for more detail.

As primary reviewer, I am satisfied that the proposed course structure and approach will maintain the graduate standards for these courses (already approved by the Faculty Senate) while allowing a few undergraduates to benefit from the federal program supporting them.

I move to approve this proposal.
